

DHANASHREE AMBADKAR

Security Specialist • Application Security Engineer • DevSecOps & Shift-Left Practitioner
+91 7378999805 • dhanashree.ambadkar.5@gmail.com • dhanashreeam.github.io/dhanaA2 • Immediate Joiner

PROFESSIONAL SUMMARY

Results-driven Security Specialist with 4+ years of experience delivering application security, technical audits, threat modelling, and DevSecOps transformation across enterprise Android platforms serving 500K+ users. Adept at embedding Shift-Left security controls into Agile CI/CD pipelines, conducting architecture-level API and microservices security assessments, and translating complex risk findings into actionable remediation roadmaps for engineering and senior stakeholders. Delivered a 65% reduction in vulnerability exposure, 40% fewer post-release defects, and 100% audit success across GDPR and India DPDP compliance programmes.

CORE COMPETENCIES & TECHNICAL SKILLS

Security Operations & Audits: Technical Security Audits • Application Security Assessments • Threat Modelling (STRIDE, PASTA) • Vulnerability Detection, Tracking & Incident Resolution • Risk Assessment (CVE/CVSS) • Patch Management

Application Security: SAST (SonarQube) • DAST (OWASP ZAP, Burp Suite) • SCA • OWASP Top 10 / MASVS • Secure Code Review • API Security • Penetration Testing (MobSF, Frida)

Architecture & DevSecOps: Shift-Left Security • Secure SDLC • CI/CD Security Gates (Jenkins, GitHub Actions) • Architecture / Design-Level Security Validation • Microservices, Service-Oriented & Event-Driven Architecture Review

Protocols & Networking: TCP/IP • UDP • SSL/TLS • HTTPS • HTTP • IPsec • BGP • REST API Security

Frameworks & Compliance: NIST • ISO 27001 • OWASP MASVS • GDPR • India DPDP • DPIA / PIA • AWS Cloud-Native Security

AI & Productivity Tools: GitHub Copilot (AI-assisted secure code review) • ChatGPT / Claude • Google Gemini • Microsoft Copilot • AI-augmented SAST triage • Prompt engineering for security documentation

Tools & Programming: SonarQube • Burp Suite • MobSF • Postman • CI/CD pipelines • Frida • Jira • Git • Firebase • Jenkins • GitHub Actions • Android Studio • Xcode • Katalon Studio • Kotlin • Java • Python • C / C++ • JavaScript • HTML • CSS

PROFESSIONAL EXPERIENCE

Security Specialist / Application Security Engineer

Tata Consultancy Services Jun 2024 – Sep 2025

- Engineered and operated end-to-end application security solutions for Android platforms with 500K+ active users — executing SAST (SonarQube), DAST (OWASP ZAP / Burp Suite), and SCA to continuously detect, prioritise, and remediate vulnerabilities across the release cycle.
- Spearheaded threat modelling exercises using STRIDE and PASTA at the architecture design phase, embedding security controls before development commenced — eliminating design-level risk 100% upstream of the coding stage.
- Conducted technical security audits and architecture-level security validation across REST APIs and microservices, surfacing attack surface exposures in service-oriented and event-driven architectures.
- Architected and deployed automated security gates (SAST, DAST, SCA) within Agile CI/CD pipelines (Jenkins, GitHub Actions), achieving a 40% reduction in post-release vulnerabilities and standardising Shift-Left practices across multiple development teams.
- Identified and remediated 150+ high/critical vulnerabilities, reducing overall risk exposure by 65%; delivered CVSS-scored incident resolution roadmaps and remediation status updates directly to product owners and senior engineering stakeholders.
- Assessed API security architecture — covering authentication schemes, transport-layer controls (SSL/TLS, HTTPS), and service communication protocols — across serverless and microservices environments.
- Partnered with development teams in Agile sprint ceremonies to prioritise security backlog items and validate that security requirements were met from design through release.

- Leveraged AI-assisted tools (GitHub Copilot, Claude) to accelerate secure code review workflows and generate first-draft threat modelling documentation, reducing manual review overhead.

Functional Privacy & Compliance Manager

Tata Consultancy Services Apr 2023 – Jun 2025

- Implemented and operated IT security and data privacy policies across multiple product lines, achieving 100% audit success with zero findings against GDPR and India DPDP standards.
- Executed Data Protection Impact Assessments (DPIA) and Privacy Impact Assessments (PIA) aligned to the NIST Privacy Framework, integrated into the SDLC at the design stage for all major product releases.
- Optimised compliance review workflows and reporting pipelines, cutting compliance cycle time by 35% and enabling real-time posture reporting to senior leadership and legal teams.

Android Security Developer

Tata Consultancy Services Aug 2021 – May 2024

- Architected and delivered a secure authentication application for 500K+ users, implementing AES encryption, certificate pinning (SSL/TLS), and full OWASP MASVS security hardening — validated through architecture-level security reviews at every design and build phase.
- Executed SCA-style dependency audits on third-party libraries, proactively detecting known CVEs before release and contributing to continuous vulnerability management.
- Embedded Shift-Left security requirements directly into Agile user stories, collaborating cross-functionally to enforce secure SDLC practices from sprint planning through deployment.
- Automated functional and security regression testing via Katalon, reducing manual QA effort by 80% and accelerating sprint velocity across release cycles.

Web Development Intern

Obdurate Technologies Jun 2019 – Jul 2019

- Performed DAST scanning on web applications; identified and mitigated XSS vulnerabilities (OWASP Top 10) prior to deployment, applying early-stage Shift-Left security controls.

KEY SECURITY PROJECTS

Android Vulnerability Assessment & Hardening — 2024

- Executed a comprehensive technical security audit using OWASP MASVS, MobSF, Burp Suite, and Frida; performed SCA to identify vulnerable third-party dependencies across authentication, data storage, and network communication layers.
- Identified and remediated 30+ vulnerabilities — reducing critical risk count to zero; delivered CVSS-scored audit reports with prioritised remediation recommendations to project stakeholders.

SAST / DAST / SCA Pipeline Automation — 2023

- Integrated SonarQube (SAST), OWASP ZAP (DAST), and SCA tooling into Jenkins CI/CD pipelines, establishing automated security gating and enforcing Shift-Left practices across multiple Agile development teams.
- Produced tech stack review reports identifying outdated runtimes and frameworks with known CVEs, directly informing patch management strategy and architecture decisions.

Privacy Compliance Dashboard — 2023

- Designed and built a centralized GDPR/DPDP compliance tracking and reporting system spanning 10+ teams, providing real-time audit readiness status and security policy compliance visibility to senior leadership.

EDUCATION

B.E. Computer Science — Sipna College of Engineering & Technology 2017 – 2021

CERTIFICATIONS

OWASP Top 10 • Android Security & Architecture • CEHv13 (In Progress)
